

Software Asset Management (SAM) Services

At one time or another, most business owners or managers have had to think about software compliance.

With employee turnover, new hardware purchases and re-deployment of old computers being part of everyday business, even companies with the best intentions find it easy to lose track of what's what.

At Sandbox Technologies, we're committed to helping our clients to keep in compliance with software licensing laws. That's why we created SAM-Assure. Sam Assure is a detailed audit and review service that we offer to our small business customers.

SAM-Assure Explained

Using similar methodologies to those employed by Microsoft and the BSA , (Business Software Alliance) during their audits, we'll create a detailed software inventory of your entire network infrastructure, explain the unique (and sometimes convoluted) licensing requirements of each vendor's product that's in use, and help you to determine whether or not your company is in compliance.

Quarterly Reviews

For customers who also subscribe to our Remote Monitoring Service, we offer an additional quarterly review service. For a nominal fee, business owners can keep tabs on what software resides on their equipment, identify unauthorized installations by employees, and enjoy the peace of mind of knowing that their organization is in compliance.

For more information about SAM Services, ask your Sandbox Technologies Engineer, or contact us at (424) 207-5130, ext. 109.
