Information Security Awareness Training

According to a recent Gartner Group study, social engineering currently represents the single greatest risk to companies and individual Internet users. This trend is expected to continue for the next ten years.

Maintaining a secure infrastructure is no longer enough – User vigilance is imperative.

Threat Awareness

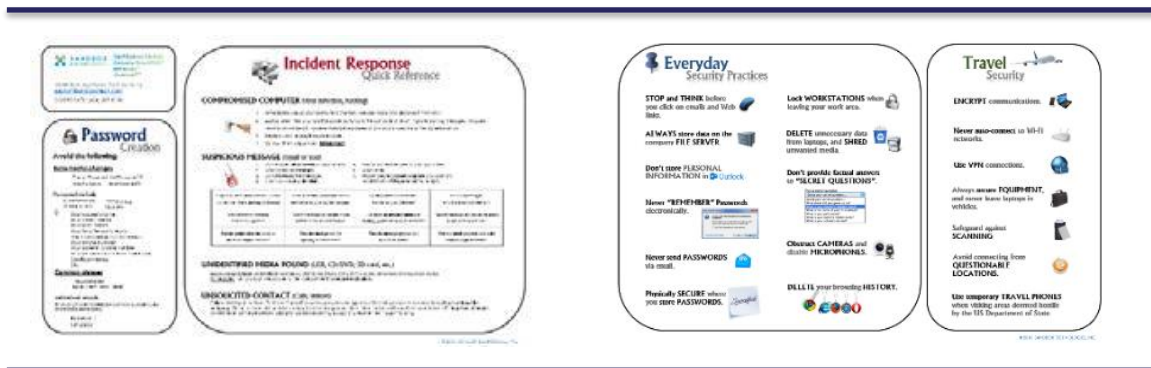

A well-informed user base significantly reduces the likelihood of a breach. Train your users to spot signs of common social engineering schemes, including phishing, vishing, pharming and other deceptions.

User Response

Teach users how to take the appropriate action(s) in the event of a suspected breach. Reinforce the importance of reporting suspicious emails, telephone calls and other threats.

Proactive User Practices

Learn safe password practices. Teach your staff the basics of physical equipment security, and the employee's role in protecting company resources.

Information security awareness training is available at a flat rate, based on the number of lectures. For optimal results, it is recommended that groups be limited to thirty persons per session. Additional services, including Web-based sessions, and simulated phishing attacks to test under retention are also available for an additional fee.

For additional information, contact your Sandbox Technologies Engineer, Account Manager or Consulting CIO, or send an email to inquiries@sandboxtech.com.
